BUSINESS REQUIREMENTS DOCUMENT

Personalised Snack Recommendation Feature

Munchu App · Healthy Snacking · India · May 2026

Document Title	BRD — Personalised Snack Recommendation Feature
Author	Ayaan Ansari, BMS Core Marketing
Version	1.0 — Draft
Date	May 2026
Status	Ready for Review
Project	Munchu — D2C Healthy Snacking App
Prepared For	Product & Engineering Team (Simulated Exercise)

1. EXECUTIVE SUMMARY

This Business Requirements Document (BRD) outlines the requirements for a Personalised Snack Recommendation Feature on the Munchu app — a fictional D2C healthy snacking platform targeting working professionals in urban India aged 30-35+.

This document is informed by a comprehensive consumer intelligence study across 3 competing brands — Yoga Bar, Too Yumm, and Slurrp Farm — involving 10,000+ Amazon consumer ratings, 52 weeks of Google Trends data, pricing intelligence, and social media audits.

Core finding: consumers face significant decision fatigue when choosing healthy snacks. With 50+ SKUs and confusing health claims, buyers either purchase randomly or abandon the category. A personalised recommendation quiz solves this directly and is not offered by any existing competitor.

2. BUSINESS CONTEXT & PROBLEM STATEMENT

2.1 Market Background

India's healthy snacking market grows at 20%+ CAGR. However, the three leading D2C brands leave significant gaps:

Brand	Strength	Key Gap
Yoga Bar	Strong Amazon presence (7,767 reviews)	Price sensitivity — Value for Money flagged repeatedly
Too Yumm	'Baked not fried' messaging resonates	Digitally invisible — avg Google Trends score of 2/100
Slurrp Farm	Highest 5-star % (60%)	Taste polarisation + premium pricing (₹1.8–3.1/g)

2.2 The Core Problem

Working professionals aged 30–35+ — the highest-spending, most health-aware urban segment — are completely unapproached, unaddressed by all three brands. When they engage with healthy snacking platforms they face:

- Decision fatigue — 50+ SKUs with no personalisation or guidance
- Misleading health claims — no transparent ingredient-to-benefit mapping
- Poor discovery — no quiz, no filtering, no recommendation engine
- Price confusion — no clear value proposition at different price points

2.3 Business Opportunity

A personalised snack recommendation feature directly addresses the discovery problem. 5 targeted questions about health goals, dietary preferences, and taste — followed by 3 tailored product recommendations with 'why this suits you' explanations — solves the problem no competitor has attempted.

3. BUSINESS OBJECTIVES

This feature must achieve the following business objectives within 90 days of launch:

Objective	Description	Priority
Improve Discovery	Help users find relevant products faster — reduce time-to-add-to-cart	High
Increase Conversion	Convert browsing users into buyers via personalised recommendations	High
Build Brand Trust	Use transparent 'why this suits you' explanations to build credibility	High
Drive Retention	Personalised experience encourages return visits and repeat purchase	Medium
Competitive Differentiation	No competitor offers a recommendation quiz — own this space	Medium

4. SCOPE

4.1 In Scope

- 5-question onboarding quiz (health goal, dietary preference, snack timing, taste, budget)
- Matching logic to map quiz responses to product catalogue
- Results page displaying exactly 3 personalised product recommendations
- 'Why this suits you' explanation card per recommended product (max 2 lines)
- Option to retake quiz or browse freely from results page

- Quiz data saved to user profile for future personalisation

4.2 Out of Scope — Future Phases

- AI/ML-based dynamic recommendation engine (Phase 2)
- Integration with HealthifyMe or Apple Health (Phase 3)
- Subscription-based personalised snack boxes (Phase 3)
- Community features or social sharing of quiz results (Phase 4)

5. STAKEHOLDERS

Stakeholder	Role	Interest in Feature
Product Manager	Feature owner — defines priority and roadmap	Conversion rate improvement + feature adoption metrics
Engineering Team	Builds quiz flow and recommendation logic	Clear technical requirements and unambiguous specs
Marketing Team	Promotes feature + uses quiz data for campaigns	Lead data, content personalisation, audience insights
UX/Design Team	Designs quiz UI and results page experience	Clean, minimal user flow with low friction
End Users	Working professionals 25–35 using the app	Fast, relevant, trustworthy snack recommendations
Business Analyst	Documents requirements and success criteria	Complete, measurable, and unambiguous requirements

6. PRIMARY USER PERSONA

Derived from real consumer behaviour data gathered during the competitive intelligence research phase (Project 1).

Persona Name	Rhea Sharma, 28 — Marketing Executive, Mumbai
Goal	Snack healthy without spending 20 minutes researching or second-guessing labels
Frustrations	Misleading 'healthy' labels, too many options, doesn't know what suits her body or goals
Behaviour	Shops on Blinkit, reads Amazon reviews before buying, follows fitness micro-influencers
Tech Comfort	High — uses Swiggy, Zepto, Nykaa daily; comfortable with app-based discovery flows
Price Sensitivity	Moderate — willing to pay ₹80–150 per snack if she trusts the brand and understands the value

Representative Quote	"I just want someone to tell me what to eat."

7. USER JOURNEY MAP

7.1 Current Journey — Without Feature (Pain Points)

Stage	User Action	Pain Point
Trigger	Feels hungry, needs a healthy snack	No specific brand or product in mind
Discovery	Opens Munchu app, browses catalogue	Sees 50+ products — immediately overwhelmed
Evaluation	Reads product descriptions and labels	Confusing health claims, no personalisation
Research	Googles reviews or checks Amazon for validation	Loses context, may switch platform entirely
Decision	Buys randomly or exits without purchasing	Low confidence in choice — high drop-off rate
Post-Purchase	May return product or feel buyer's remorse	No trust built — low repeat purchase likelihood

7.2 Improved Journey — With Recommendation Feature

Stage	User Action	Outcome
Trigger	Feels hungry, opens Munchu app	Greeted with 'Find your snack' CTA on home screen
Quiz Start	Taps CTA, begins 5-question quiz	Simple, fast — each question under 10 seconds
Quiz Completion	Answers all 5 questions in under 60 seconds	Loading screen: 'Finding your matches...'
Results	Sees 3 personalised product recommendation cards	Each card shows 'Why this suits you' explanation
Decision	Adds preferred recommendation to cart	High confidence — decision made in under 2 minutes
Return Visit	Quiz responses saved for future sessions	Repeat buyers get updated recommendations

8. FUNCTIONAL REQUIREMENTS

Priority levels: Must Have (M) = non-negotiable for launch, Should Have (S) = important but not blocking, Could Have (C) = nice-to-have for future sprint.

ID	Requirement	Priority	Category
FR-01	System shall display a 'Find Your Snack' CTA button on the app home screen	Must Have	UI
FR-02	System shall present a 5-question quiz upon CTA tap	Must Have	Core
FR-03	Q1: 'What is your health goal?' — Weight management / Energy / Gut health / Just tasty	Must Have	Quiz
FR-04	Q2: 'Any dietary preferences?' — Vegan / Gluten-free / No preference	Must Have	Quiz
FR-05	Q3: 'When do you usually snack?' — Morning / Afternoon / Late night	Must Have	Quiz
FR-06	Q4: 'Taste preference?' — Sweet / Savoury / Both	Must Have	Quiz
FR-07	Q5: 'Budget per snack?' — Under ₹50 / ₹50–100 / No limit	Must Have	Quiz
FR-08	System shall display a loading screen after quiz submission	Should Have	UI
FR-09	System shall display exactly 3 personalised product recommendations	Must Have	Core
FR-10	Each product card shall show a 'Why this suits you' explanation (max 2 lines)	Must Have	Core
FR-11	User shall add any recommended product to cart directly from results screen	Must Have	Commerce
FR-12	User shall have option to retake quiz or browse full catalogue from results	Should Have	UI
FR-13	System shall save quiz responses to user profile for future sessions	Should Have	Data
FR-14	System shall allow users to update preferences from profile settings	Could Have	Data
FR-15	System shall track which recommendations were added to cart (analytics)	Should Have	Analytics

9. NON-FUNCTIONAL REQUIREMENTS

Category	Requirement	Target
Performance	Quiz to results load time	Under 3 seconds on 4G connection
Usability	Quiz completion rate	Above 70% of users who start the quiz
Availability	Feature uptime	99.5% during peak hours (7–10 PM)
Scalability	Concurrent sessions supported	10,000 simultaneous quiz sessions
Security	User quiz data storage	Encrypted, GDPR-compliant, user-deletable
Accessibility	Screen reader compatibility	WCAG 2.1 AA compliant quiz interface

10. SUCCESS METRICS & KPIs

The following metrics will be tracked to evaluate feature success within 90 days of launch:

Metric	Definition	Target (90 Days)
Quiz Start Rate	% of app sessions where user taps 'Find Your Snack' CTA	**25% of all sessions**
Quiz Completion Rate	% of users who finish all 5 questions after starting	**>70%**
Recommendation CTR	% of results page views where user taps a product card	**>50%**
Add-to-Cart Rate	% of quiz completions resulting in cart addition	**>35%**
Purchase Conversion	% of quiz completions resulting in purchase	**>20%**
Return Session Rate	% of quiz users who return within 7 days	**>40%**
NPS Score	User satisfaction rating after first quiz experience	**>45**

11. COMPETITIVE POSITIONING — MUNCHU vs MARKET

Data sourced from primary research: 10,000+ Amazon ratings, Google Trends (52 weeks), Instagram audits, and platform mapping across 6 channels.

Parameter	Yoga Bar	Too Yumm	Slurrp Farm	Munchu (Target)
Target Audience	Fitness crowd 22–35	Mass market youth	Health parents 28–40	**Professionals 25–35**
Price/gram	₹0.65–1.00	₹0.24–0.48	₹1.80–3.10	**₹0.80–1.20 (target)**
Amazon Reviews	7,767	374 (fragmented)	1,890	**Target: 2,000+ Year 1**
5-Star %	55%	58%	60%	**Target: >65%**
Search Interest	53/100 avg	2/100 avg	12/100 avg	**Target: 30 in Year 1**
Instagram Followers	190K	75K	320K	**Target: 50K Year 1**
Rec. Feature	None	None	None	**Core USP — Quiz**
Primary Channel	Amazon + D2C	Offline Retail	Multi-platform	**Blinkit + D2C first**

12. ASSUMPTIONS & CONSTRAINTS

12.1 Assumptions

- Munchu product catalogue has at least 20 SKUs mapped to health goal, dietary, taste, and budget tags
- Engineering team can build and deploy quiz flow within a 6-week sprint
- User authentication exists — quiz responses can be saved to user profiles
- Analytics infrastructure (Mixpanel or equivalent) is in place to track quiz metrics

12.2 Constraints

- Feature must be built within existing engineering capacity — no new hires for Phase 1
- Must launch within 8 weeks of BRD sign-off
- Mobile-first (iOS and Android) — web version out of scope for Phase 1
- Personalisation uses rule-based matching in Phase 1 — no ML until Phase 2

13. BUSINESS CASE STUDY — MUNCHU MARKET ENTRY

Problem

India's healthy snacking category is growing rapidly but poorly served. The top 3 brands — Yoga Bar, Too Yumm, and Slurrp Farm — collectively leave working professionals (35+) completely unaddressed. Yoga Bar is expensive, Too Yumm is digitally invisible, Slurrp Farm targets parents. No brand offers personalised discovery, and all three have content strategies that misalign with what consumers actually care about.

Analysis — 4 Market Gaps Identified

- Audience gap — working professionals 30-35 or above ignored by all 3 brands
- Price gap — affordable health snacking (₹0.80–1.20/g) is unclaimed territory
- Discovery gap — no brand offers personalised recommendation or quiz navigation
- Content gap — brands talk science; consumers care about taste and honest value

Solution

Munchu enters as an online-first D2C healthy snacking brand targeting working professionals. Priced at ₹0.80–1.20/gram — above Too Yumm (signals quality) but below Slurrp Farm (signals accessibility). The personalised recommendation quiz is the hero feature no competitor offers, reducing decision fatigue and building trust from the first interaction.

Expected Outcomes — Year 1

Metric	Target	Rationale
Monthly Active Users	50,000	Driven by Blinkit listing + Instagram content strategy
Quiz Completion Rate	>70%	Based on Nykaa skin quiz benchmarks in similar D2C category
Repeat Purchase Rate	>40%	Personalisation drives loyalty — industry average is 28%

Amazon Review Volume	2,000+	Achievable with structured post-purchase review request flow
Instagram Followers	50,000	Content-led growth targeting #WorkFromHome and #HealthySnacking

Conclusion

Munchu's market entry is strategically timed and clearly differentiated. The personalised recommendation feature serves as both a product differentiator and a data collection mechanism that compounds in value over time. By owning the working professional segment with accessible pricing, taste-first content, and an industry-first quiz — Munchu has a clear path to carving meaningful share in a category all three incumbents have left partially unserved.
